

Progress Report Number 2

Name: Gurpinder Singh

Student ID: 300389859

Project Name: W25_3375_S1_G8_StudentCommunity

Date	Hours	Description of work done
Mar 7, 2025	1.5	Group meeting to discuss and plan the Requirement Gathering Documentation Initiated the structuring of the document based on key discussions and insights.
Mar 10, 2025	2	Collected and organized survey responses for data analysis . Used data visualization tools (charts, graphs) to identify key trends from survey responses. Document all the findings.
Mar 12, 2025	0.5	Plan and write the personas of Animesh and David.
Mar 15, 2025	2.5	Worked on the requirement generation for Sadia and documented the master list of requirement generation and Synthesis of Requirements Gathering and Generation
Mar 16, 2025	0.5	Conducted a group meeting to review the documentation on requirements gathering.
Mar 19, 2025	0.5	Held a group meeting to discuss the final UI design for the project. Tasks and responsibilities for the final UI design were reviewed and assigned.
Mar 21, 2025	2	Started designing the admin interface for the project. The initial layout for the Dashboard page has been created

Week1 (from Mar 7 – Mar 9)

In this work, I participated in Requirement Gathering Documentation by doing work, individual and group. I worked on documentation by drafting survey questions, defining objectives. I shared my survey to increase its range and after getting responses, I collected data from google forms in form of easy-to-understand charts.

Week2(from Mar10 – Mar16)

In this week, I worked on **Requirement generation** as I planned and written the personas of David and Animesh and after this I shared and personas with teammate and started listing requirements for Sadia that was created by teammate. Then we arranged a group meeting in order to create a master list out of these listed requirements.

Week 9 (From Mar 17 – Today Mar21, 2025)

In this week, I participated in a group meeting to finalize the UI design, where we divided responsibilities among team members. I then focused on designing the admin interface, creating the initial Dashboard layout while ensuring alignment with project objectives.
